

POWER BI DATASET ASSESSMENT FORM

1. Your Name: Aflah

2. Dataset's Name: DataCoSupplyChainDataset.csv

3. Dataset's Link:

<https://www.kaggle.com/datasets/shashwatwork/dataco-smart-supply-chain-for-big-data-analysis>

4. Project Goal:

The main objective of this project is to analyze the DataCo Supply Chain dataset to gain insights into shipment delays, delivery performance, logistics efficiency, and profitability. The dashboard will help identify bottlenecks in the supply chain, improve On-Time Delivery (OTD) rate, reduce costs, and support better sourcing and operational decisions.

5. Data Quality

- **How will you handle missing values in important fields (if any)?** Missing values will be handled logically in Power Query. Essential fields like Order Date and
- Delivery Status will be thoroughly checked. Minor missing values in numerical fields will be imputed using mean/median where appropriate, while irrelevant or
- corrupted rows will be filtered out.
- **Provide the source of the dataset:** Kaggle – DataCo SMART SUPPLY CHAIN FOR BIG DATA ANALYSIS

6. Data Structure

- **What is the file format of the dataset?** CSV
- **How many records (rows) does the dataset contain?** Approximately 180,519 rows
- **How many columns does the dataset have?** 53 columns

7. Data Content

List the important columns and type of data in them:

- order date (DateOrders) → Date/Time
- Days for shipping (real) → Whole Number
- Days for shipment (scheduled) → Whole Number
- Delivery Status → Text
- Late_delivery_risk → Whole Number
- Shipping Mode → Text
- Product Category → Text
- Department Name → Text
- Benefit per order → Decimal Number (will be used as Profit)
- Sales per customer → Decimal Number
- Order Region → Text
- Order Country → Text
- Customer Segment → Text
- Order Status → Text

Do the columns contain consistent data?

Yes, most columns have consistent data types (minor type conversion needed for dates and numbers in Power Query).

Are there any calculated fields in the dataset?

No. Calculated fields will be created during cleaning:

- Delay Days
- On Time Flag
- Year, Quarter, Month Name

Does the dataset include any categorical variables?

Yes – Product Category, Department Name, Shipping Mode, Delivery Status, Customer Segment, Order Region, Order Country.

8. Size & Performance

- Size of the dataset: ~95 MB

9. Trends, Comparisons & Correlations

Yes, the dataset allows exploration of trends (monthly/quarterly delays and sales), comparisons (performance by shipping mode, region, category), and correlations (relationship between delay days, shipping mode, and profit).
