

Analysis Report

Supply Chain Performance & Risk Analysis Dashboard

Prepared by: Aflah

April 2026

1. Project Objective

The objective of this project was to develop an interactive Power BI dashboard using the DataCo Supply Chain dataset (180,519 records) to provide end-to-end visibility into supply chain operations, identify bottlenecks, and support data-driven decisions to improve On-Time Delivery, reduce delays, and increase profitability.

2. Key Insights

- **Delivery Performance:** Overall On-Time Delivery (OTD) rate is only **45.17%**, while Late Delivery Rate is **54.83%**. This indicates that more than half of the orders are getting delayed.
- **Shipping Mode Impact:** Standard Class has the highest number of late orders (41K), making it the biggest contributor to delays.
- **Profitability:** Total Profit stands at **₹3.97 Million** with a Profit Margin of **12%**. Profit is highly concentrated in a few categories, with **Fishing** being the highest contributor at **₹0.76M**.
- **Regional Variation:** Significant differences exist across regions. West Africa shows relatively better OTD %, while some regions like North Africa have very low performance (~12%).

3. Major Findings

- Delay issues are widespread, with Total Delayed Days reaching **99K**.
- There is a clear correlation between shipping mode and delay rates.
- Profitability and delivery performance vary significantly by both product category and geographic region.
- The dashboard successfully highlights that improving delivery reliability should be the top priority.

4. Recommendations

- Focus operational improvements on **Standard Class** shipping to reduce late orders.
- Conduct region-specific interventions in low-performing areas (e.g., North Africa, Central Asia).
- Prioritize high-profit categories like Fishing while investigating underperforming ones.
- Use the dashboard for daily monitoring of OTD % and delay trends to take proactive actions.

5. Limitations

- Analysis is based solely on historical data (2015–2018).
- No predictive modeling or forecasting was included.
- Some assumptions were made during data cleaning due to unclear column

descriptions.

6. Conclusion

This Power BI dashboard provides valuable insights into supply chain performance and highlights critical areas for improvement. By addressing delivery delays and focusing on high-impact regions and categories, DataCo Global can significantly enhance customer satisfaction and overall profitability.
